## Studio FRAU18•08 PARTNERS

Fifteen years of business...

We represent an important goal for any professional.

We are a company whose history is closely linked with the social evolution, development and difficulties that our country has been through in recent years.

In a little over a decade we have seen distinct transformation and increased capabilities in our lifestyle, work, thoughts and movements.

The **FRAU18•08 partners** office was not born by chance, but through a series of various key circumstances, human resource availability, hard work, capital, market competence, intuition, good business sense and consolidation in company history. All of these traits have helped to guide this company on a consistent and precise route, which has enabled it to react to market forces with solutions, which stimulate its development.

The success of the group is closely linked to Italian exuberance in an economic and social and cultural context and in the extraordinary creativity that is today a part of the DNA of the people.

Today **FRAU18•08 partners** office offers you the development and realization of your story because a principle is not only an idea...

arch. Mario Frau

## Mario Frau Architect

He was born at Genoa in 1968 and was graduated at the faculty of Architecture of the Milan Polytechnic, continuing at a Master in Landscape Design, Protection and realization of gardens.

Through all these experiences together with his teaching activity at the Faculty of Architecture and Industrial Design of the Milan Polytechnic and various collaborations with Lighting Designers and foreign architects, commences his career in the field of architecture, landscape and light design.

He has been active for more of a decade not only in architectural planning, Interior and Industrial Design, but in systems planning for lighting in interior or exterior spaces as well.

The basic idea of architecture, interior design, light and space seen as indivisible components of project development, guide him at the creation of a interdisciplinary group of professionals and at the foundation of the studio FRAU18•08 partners. Competence, passion and intuition are the elements that characterize in total his activity and made him being a fondant associate in December 1998 of APIL, Associazione Professionisti dell'illuminazione (the Italian name for the Professional Association of Lighting).

## - Office Structure

### architecture

Relevant architecture design for the third millennium, redefining the relationship between culture and environment, structure and space. The fusion of future vision and the processing and aesthetics characterize our Architecture. One of the things that have focused our ambition is the extraordinary speed with which architecture has evolved and has contributed to global market change. We offer the best service for our clients, through stimulating dialogue in our field with professional consultants and other international companies...

### lighting

Our work is that of revealing space that surrounds us when the night grows weak. Returning the city to its panoramic pattern in a harmonious way, above all vision and space, house and monument foundations with an eye on greenery and efficiently, carefully or artistically lit public or private gardens if the place needs it. All these above come as the result of sensitive consultancy requested by our clients...

### landscape

Nature's spontaneity or rigid symmetry? Mediterranean atmosphere or Japanese style?

Tiny spaces or huge areas? A Renaissance garden or something a little more informal? Behind the final work there has always been a creative journey, technically and botanically completed, from the hanging garden to historically restored garden. The garden is always thought of as more amazing, bewitching and surprising like a "theatre of vegetative" where light, water and music decorate and perfume the scene of continuous change...

### design

Is it better to think of a "difficult product" to produce and copy, which involves great investment and therefore will last through time or produce pieces which characterize its "originality" or "company style"? The company must question, give input and discuss with the Designer as it is only through detailed analysis and dialogue that the success of a product can be born. However, our job is to be courageous and loving of new innovations and daring experimental vision, which try new roads and seek the vision nurtured by us...
